Tgrid+[®]

Wire Grid

About Tgrid+[®]

The Tgrid+[®] wire grid system from Productions Unlimited, Inc. presents a better alternative to traditional tension-wire lighting grids. Our factory woven hard wire is more stable, stronger, and makes a more comfortable walking surface than tensioned wire rope.

- Panels can be customized to fit any space.
- The level walking surface reduces the risk of tripping.
- No gaps between panels means minimal obstructions.
- Live load capacity of 20 psf (97.6 kg/m²) - higher psf is also available.
- No maintenance required, such as periodic tensioning of wire rope.
- Construction is economic and durable.
- Hanging system uses standard pipe and threaded rod for suspension.
- Standardized wall brackets are slotted for ease of installation.
- Minimal structure means fewer obstructions to shoot light around.
- The wire grid system provides a safe way to access difficult to reach areas.
- The entire assembly can be powder coated any color.
- Items can be suspended from individual wire or groups of wire (within their capacity) without risk of damage.
- 2" open space between wires provides for passing 1-1/2" pipe through grid openings.
