Wagon Brake Bracket

About Wagon Brake Bracket

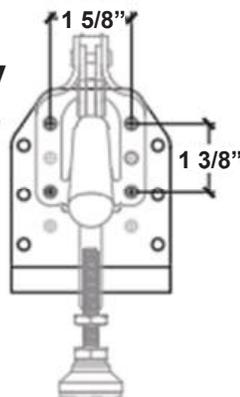

The Wagon Brake Bracket from Productions Unlimited, Inc. is designed for two types of brakes and three types of platform framing which are in standard use in the industry:

Model Number	Brake	Platform Framing
WBBA300-2XL Assembly	300 lb brake	2x4 lumber
WBBA800-2XL Assembly	800 lb brake	2x4 lumber
WBBA300-1XL Assembly	300 lb brake	1x6 lumber
WBBA800-1XL Assembly	800 lb brake	1x6 lumber
WBBA300-1XS Assembly	300 lb brake	1" wide metal tube
WBBA800-1XS Assembly	800 lb brake	1" wide metal tube

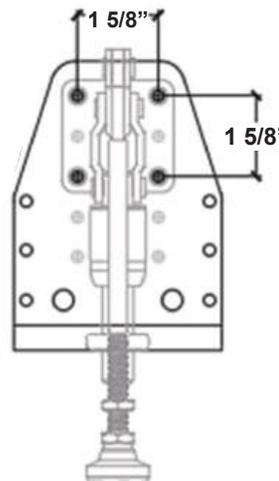

- “Hook” style allows the bracket to support the weight of the platform and load without imparting that weight to the screws or bolts attaching the bracket.
- May be mounted so that it can be quickly removed and replaced or transferred to another wagon. Screws for mounting brake to bracket provided.
- Multiple sets of mounting holes, tapped to match the treads of the mounting screws provided, are placed so multiple positions can be used to match various platform heights. This prevents the need to extend the mounting foot out too far from the brake tip, allowing it to bend when side force is applied.
- Bracket manufactured for brakes with hole spacing indicated below.
- **Note:** Works with most typical toggle clamp/wagon brakes prevalent in the industry; however, we can only guarantee hole placement for brakes provided by PUI.

**300 lb.
Capacity**

**800 lb.
